**COVER:** A juvenile Great Horned Owl (*Bubo virginianus*) with remnants of a recent meal and mosquitos on its eyes. The juvenile fledged from one of the northernmost recorded Great Horned Owl nests, in a witch's broom along the Middle Fork Koyukuk Valley, Alaska, USA, June 2017. See the article by Reynolds *et al.* (337–345) that investigated the diet and reproductive success of the owl at its northern range limit using both nest cameras and collection of prey remains.
